

HSE INCIDENT & CAPA COMPLIANCE PORTAL

Business Requirements Document (BRD) - Business User Sign-Off Specification

DKSH HSE Compliance Division

Author: Regional HSE Compliance Team & Business Analysts

Date: July 2026 | Version: 2.1 | Status: APPROVED

Confidentiality Notice: This document contains proprietary operational specs for internal use inside DKSH.

BUSINESS REQUIREMENTS DOCUMENT (BRD)

HSE Incident & CAPA Compliance Portal 1.0 Business Sign-Off Edition

Document Control

Item	Specification Details
Document Title	Business Requirements Document (BRD) 1.0 Executive Sign-Off Edition
Project Name	DKSH HSE CAPA Production System
System Version	1.1.0 (Business Specification)
Release Date	July 6, 2026
Target Audience	Business Sponsors, Country HSE Directors, Regional Executive Steering Committee
Document Status	**For Review & Sign-Off**

1. Executive Summary & Vision

1.1 Project Background

Health, Safety, and Environment (HSE) management is a critical pillar of operational excellence at DKSH. The DKSH HSE Incident & CAPA Compliance Portal is designed to digitize and standardize workplace incident logging and Corrective and Preventive Action (CAPA) tracking across the Asia-Pacific region.

This portal acts as a central register for HSE incidents and CAPA records. The primary goal is to replace manual spreadsheets, eliminate communication gaps, and provide a single source of truth for regional safety performance and regulatory compliance.

1.2 Key Objectives

- 1.2.1 Standardize Incident Reporting: Provide an easy-to-use, structured wizard for site-level coordinators to log occurrences (injuries, near misses, hazards) accurately.
- 1.2.2 Enhance Root Cause Analysis: Embed structured problem-solving (such as the 5-Whys methodology) directly into incident investigations.
- 1.2.3 Ensure Regional Transparency: Provide leadership with a centralized dashboard tracking regional KPIs like LTIFR and TRIR to drive safety culture improvements.

🔒 Enforce Data Governance: Secure access to sensitive safety records so users only see and manage records relevant to their authorized market.

2. User Roles & Access Rights

To ensure proper data privacy and system governance, four standard user roles are defined. This matrix details what each role is permitted to perform in the portal:

User Role	Dashboard Scope	Incident Reporting	Incident Investigation	Labor Hours Entry
Reporter *(Level 1)*	View Country Dashboard (locked to local context)	Can create, edit, and save drafts of incidents	No access to Step 4 (Investigation)	View-only (cannot modify labor hours)
Country HSE Manager *(Level 2)*	View Country Dashboard (locked to local context)	Full access to create, edit, and submit	Full access to complete 5-Whys and close actions	Can input and unlock monthly labor hours for their country
Regional HSE Manager	Full Regional Dashboard (toggle between all APAC markets)	Full access across their region	Full access across their region	View-only or update hours for regional markets
Superuser *(Global Admin)*	Consolidated global view with full market overrides	Full access to create, edit, or delete	Unrestricted access to complete investigations	Unrestricted entry and management of all labor hours

3. Core Modules & Functional Workflows

The portal is composed of three primary functional modules designed to support the end-to-end incident lifecycle.

3.1 Module 1: HSE Performance Dashboard

The dashboard serves as the central landing page, presenting safety metrics in a clean, visual layout.

🔑 Key Indicators (KPIs):

- * Safe Work Days: Continuous count of calendar days since the last recorded Lost Time Injury (LTI).
- * Frequency Rates: Standard safety performance metrics (LTIFR, TRIR) calculated dynamically based on entered labor hours.
- * Interactive Date Filter: Supports quick selection presets (e.g., *Last 30 Days*, *Current Month*, *Year to Date (YTD)*) and custom date ranges.

🔑 Monthly Labor Hours Entry:

- * Monthly configuration grid for entering direct employee hours and external contractor/other hours.
- * Accurate labor hours are critical to calculating precise frequency rates automatically.

3.2 Module 2: Step-by-Step Reporting Wizard

An intuitive wizard that guides reporters through the creation of complete, structured safety logs:

🔗 Step 1: General Info: Captures date, time, specific site location, incident severity classification, and CC email notification list.

🔗 Step 3: Affected Body Map & Incident Category: Interactive visual guide where users select affected body parts and check standard injury types (e.g., cut, bruise, burn) to build a clear record of the incident.

🔗 Step 4: Root Cause & CAPA: A structured investigation panel including:

- * 5-Whys Root Cause Analysis: A systematic line of questioning to identify the underlying cause of an event.

- * Corrective & Preventive Actions (CAPA): Log specific action descriptions, designate responsible owners, and set clear target completion dates.

3.3 Module 3: CAPA Tickets Registry

A master log enabling teams to track, search, and manage all registered safety occurrences and action tickets.

🔗 Search and Filter Panel: Filter records quickly by severity class, current ticket status (Open, Closed, Overdue), and local market.

🔗 Detail Drawer: Slide-out panel providing a complete summary of the incident details, witness information, visual body damage map, 5-Whys, and CAPA logs.

🔗 Closure & Verification: Enables Country and Regional Managers to verify actions and officially close resolved tickets.

4. Key Metrics & Calculations (High-Level)

To ensure consistency in corporate compliance auditing, the portal automatically calculates safety frequency rates normalized per 1,000,000 working hours:

4.1 Lost Time Injury Frequency Rate (LTIFR)

Measures the frequency of injuries that result in at least one full shift of absence, relative to total exposure hours worked:

$$\text{LTIFR} = \frac{\text{Total Lost Time Injuries} \times 1,000,000}{\text{Total Working Hours}} \text{ \$/\$}$$

4.2 Total Recordable Injury Rate (TRIR)

Measures the frequency of all recordable work-related injuries (including fatalities, high-consequence injuries, lost-time injuries, and medical treatment cases) relative to total exposure hours worked:

$$\text{TRIR} = \frac{\text{Total Recordable Injuries} \times 1,000,000}{\text{Total Working Hours}} \text{ \$/\$}$$

5. Document Acceptance & Business Sign-Off

By signing below, the stakeholders agree that this document accurately defines the business, functional, and operational requirements for the HSE Incident & CAPA Compliance Portal. Any future changes to this scope will be subject to the project's standard change control process.

5.1 Business Stakeholders Signatures

Stakeholder Role	Name / Title	Signature	Date
Business Sponsor			
Regional HSE Compliance Director			
Lead Business Analyst			
Country HSE Representative
